

H. Chirag Shetty

Software Engineer | Python Automation, AWS & Observability

Bengaluru, India | +91 73386 21918 | shettychirag515@gmail.com | linkedin.com/in/h-chirag-shetty-96111a223

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building Python automation, REST-triggered backend services, and AWS data pipelines for production use. Delivered reporting and automation solutions that cut execution costs by ~20%, reduced report generation time by ~40%, and saved ~5 hours/week of manual effort. Strong in Linux, Git, CI/CD, and AWS (Lambda, Batch, Step Functions, CloudWatch), with hands-on troubleshooting across infrastructure layers and client-facing delivery in Agile teams.

TECHNICAL SKILLS

Programming: Python (automation, ETL, REST APIs, Flask), Bash

Cloud & Infrastructure: AWS (Lambda, API Gateway, Batch, Step Functions, EC2, S3, ECR, IAM, VPC, CloudWatch), Docker, Linux, Terraform (in progress), AWS Glue (learning)

CI/CD & Version Control: Git, GitLab, AWS CodeCommit, AWS CodePipeline

Databases: MySQL, MongoDB, Redis

Practices & Tools: Automation frameworks, batch and asynchronous processing, CloudWatch logging and troubleshooting, Postman, Agile, AI-assisted development (Cursor, Claude)

PROFESSIONAL EXPERIENCE

Software Engineer, KPIT Technologies

Jan 2024 – Present

- Built a Python report generation service on AWS Lambda, triggered from the UI through API Gateway, that fetches data from the database, runs calculations across multiple datasets, and produces a unified report used by the client and two other teams to verify their data.
- Designed an AWS Batch reporting architecture (job orchestration, resource sizing, IAM/VPC access boundaries), reducing execution costs by ~20% and report generation time by ~40%.
- Architected task orchestration and a parallel processing strategy for batch workloads, improving resource utilization and removing runtime bottlenecks.
- Set up a CI/CD pipeline (GitLab → AWS CodeCommit → AWS CodePipeline) to automate code delivery to AWS.
- Automated summary reporting for each execution workflow, enabling consistent validation across teams and clients and saving ~5 hours/week of manual effort.
- Owned troubleshooting of backend systems and data pipelines using Python, SQL/MongoDB queries, Step Functions, and CloudWatch logs, improving incident resolution time by ~30%.
- Deployed containerized workloads on AWS ECR and Batch; used AI-assisted development tools to accelerate parts of the reporting module; worked directly with clients and engineering teams on requirements and data issues.

Software Engineering Intern, KPIT Technologies

Jun 2023 – Jan 2024

- Wrote and debugged Python scripts to resolve backend issues and validate AWS deployments; authored troubleshooting guides for recurring issues.
- Moved into a full-time engineering role within 6 months based on debugging and delivery performance.

PROJECTS

Automated Data Processing & Reporting System (Python, AWS Lambda, S3)

- Designed a serverless architecture (Lambda + S3) for scheduled ETL execution, cutting manual effort by 60%; built the Python ETL pipeline with structured logging and error handling for easier debugging.

ACHIEVEMENTS

- Manager's Discretionary Spot Award (2024, 2025) for high-impact contributions to production systems.
- Customer Satisfaction Award (7 times) for reliable solutions and fast issue resolution.

EDUCATION

B.E. Computer Science, Mangalore Institute of Technology and Engineering

2019 – 2023

CGPA: 7.65/10 | 15 years of full-time education completed
